

Beat the annual droughts and 'water outages' and save water by installing this incremental water conservation/ back-up system

Basic Unit: Rain water harvesting tank

1. Cement base for the Tank to stand on.
2. 1000L or 2500L Rain Water tank connected to your gutter down-pipe
3. Leaf catcher to filter out debris
4. Ball valve on your tank for non-pressurised water outlet.

Costs: 1000L tank system: R6 990 (before Vat)
 2 500L tank system: R7 990 (before Vat)

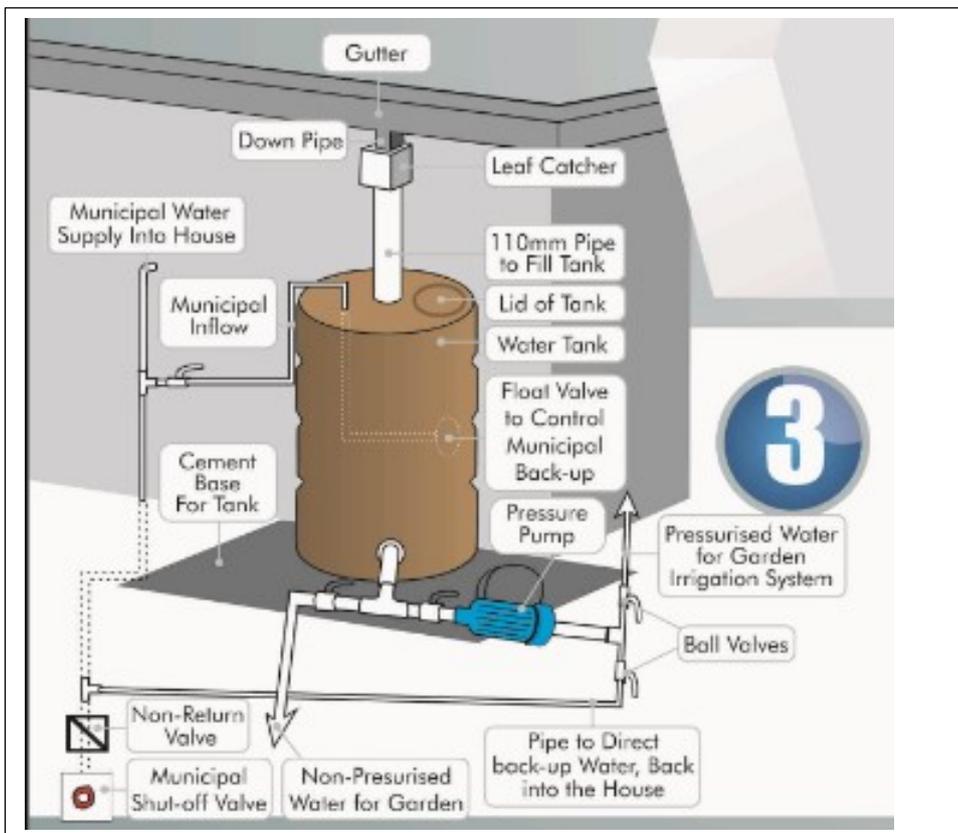

Intermediate Unit: Rain water harvesting tank plus municipal back-up (for when it does not rain).

1. Cement base for the Tank to stand on.
2. 2500L Rain Water tank connected to your gutter down-pipe
3. Leaf catcher to filter out debris
4. Ball valve on your tank for non-pressurised water outlet.
5. Piping from municipal feed into tank
6. Electronic float valve to keep tank full at all times (can be adjusted for summer/winter)

Costs From R12 490 (before Vat) installed (based on 2 500L tank and distance to main water supply)

Upgrade cost: From Basic unit: R3 500 (price before Vat).

Advanced unit: Includes a pressure pump and water regulator to allow for connection to a garden sprinkler/ irrigation system.

1. Cement base for the Tank to stand on.
2. 2500L Rain Water tank connected to your gutter down-pipe
3. Leaf catcher to filter out debris
4. Ball valve on your tank for non-pressurised water outlet.
5. Piping from municipal feed into tank
6. Electronic float valve to keep tank full at all times (can be adjusted for summer/winter)
7. Pressure pump to generate sufficient pressure to drive a garden irrigation system. Output at 50L/min.
8. Note that this unit cost does not include a feed back into the house from the tank in the event of a water outage. The cost of this feed will depend on the distance from the tank to the main line (see picture opposite). Cost on request.

Costs: From R19 350 (before Vat) installed. Price based on 2 500L tank and distance to main water supply)

Upgrade cost: From Intermediate unit: R7 050 (before Vat).
